IMPORTANCE OF REGULAR DENTAL CHECK-UP AT CRESENT SCHOOL MUMBRA

Date: 02nd October 2024

Venue: Crescent School, Mumbra

Faculty: Dr. Swati Singh, Dr. Neeraj Kolge

Organizing Agency: Department Of Public Health Dentistry of MGMDCH, NSS unit of MGMDCH

Number of Students attended: 06

A routine dental check-up is important to ensure that there are no issues with your oral health and to detect any concerns as early as possible. The best way to deal with oral health concerns is through prevention. A routine dental check-up allows you to detect potential issues before they worsen and to receive the proper preventive and restorative care. MGM Dental College constantly takes efforts of extending the oral health care to the community. The oral care initiative was also extended to patients at CRESENT SCHOOL MUMBRA with the intention of creating awareness about the importance of nutrition in maintenance of good oral hygiene.

Aim and objective:

1. To assess the oral health status of patients and to provide necessary Dental treatment.
2. To educate them and create awareness about importance of regular dental check-ups.
3. Effect of regular check-up on overall health of the individuals.

Method:

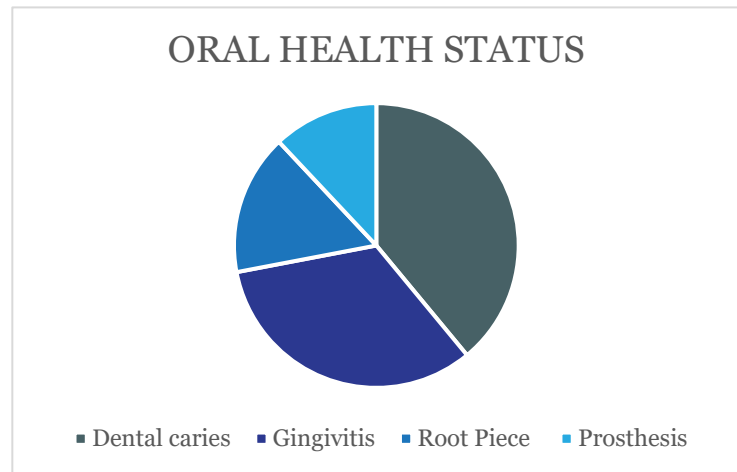

A routine dental check-up helps with the prevention of a range of oral health concerns, including but not limited to periodontal disease, teeth decay, and teeth stains. Regular dental checkups act as a vital line of defense against such issues. By identifying and addressing problems in their early stages, dentists can intervene before they transform into painful toothache or discomfort. All this was explained using pictorial banner during the program.

A type III examination was carried out with the use of mouth mirror and probe in day light. All the patients were assessed for oral health status and were explained the need to get the problems corrected. The patients were made aware of the existing dental problems and how nutrition can affect the dental health of a patient.

Observations: A total of 92 patients were examined for various dental problems. Those requiring extensive treatment were referred to MGM Dental College and Hospital, Kamothe.

Oral health status:

Condition	No. of individuals	Percentage %
Dental caries	45	39
Gingivitis	25	33
Root piece	12	16
Prosthesis	10	12

Interpretation and conclusion:

1. Dental caries and gingivitis are the most common problem among the patients which can be reduced by utilizing proper diet and nutrition and also the facilities available. A regular dental check-up can lead to decrease in the number of decayed teeth.
2. Oral health education and prevention strategies should be implemented in order to reduce the disease burden among these patients. Majority of the oral diseases are due to lack of proper health education of the patient and insufficient dietary intake.
