MGM Dental College constantly takes efforts of extending the oral health care to the underserved community. The oral care initiative was also extended to patients at St Mary's Multipurpose high School, Vashi with the intention of creating awareness and providing oral health care to the patients. The screening was carried out in 6 days .

Aim and objective:

1. To assess the oral health status of patients and to provide necessary Dental treatment.
2. To educate them and create awareness about oral health.

Method:

A type III examination was carried out with the use of ice cream sticks in day light. All the patients were assessed for oral health status and were explained the need to get the problems corrected. The patients were made aware of the existing dental problems and preventive measures were explained.

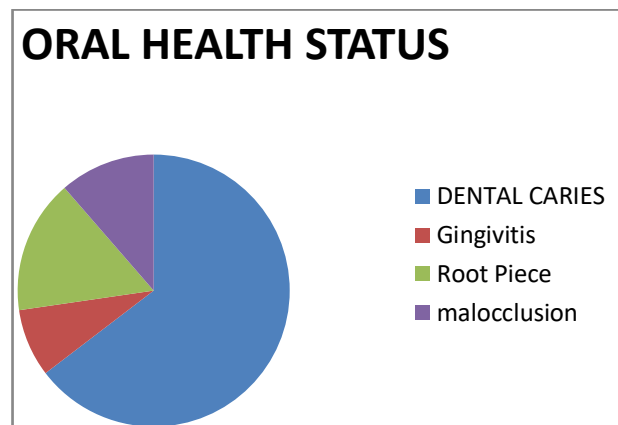

Observations: A total of 352 patients were examined for various dental problems. Those requiring extensive treatment were referred to MGM Dental College and Hospital, Kamothe.

Modified Bass Technique

Modified Bass Technique is a type of tooth brushing which is used in mixed dentition . The brush has to be put in 45 degrees at the front surface of the teeth while the bristles are projected in the pockets which surround the tooth.

Oral health status:

Condition	No. of individuals	Percentage %
Dental caries	200	56.8%
Gingivitis	25	7.1%
Root piece	50	14%
Malocclusion	35	10%

Interpretation and conclusion:

Dental caries is the most common problem among the patients followed by malocclusion .Oral health education and prevention strategies should be implemented in order to reduce the disease burden among these patients.
