ORAL HEALTH EDUCATION AWARENESS CAMP 'ORAL HYGIENE' AT LIC OFFICE, FORT MUMBAI

Date: 6th September 2023

Venue: LIC Office, Fort Mumbai

Faculty: Dr. Kashmira Kadam, Dr. Neeraj Kolge

Organizing Agency: Department of Public Health Dentistry & NSS Unit of MGMDCH & MGM New Bombay hospital Vashi

Number of Students attended: 09

Oral diseases are considered as a public health problem because of their increased prevalence with a significant social impact. Loss of tooth is the most common effect of chronic oral diseases and is associated with physical, emotional, and economic impacts. Physical appearance and diet may also worsen leading to a negative impact on the patterns of day-to-day life and social relationships. MGM Dental College always takes efforts to provide best oral health care to the community. The oral care initiative was also extended to patients at LIC Office, Fort Mumbai with the intention of creating awareness and providing oral health care to the patients.

Aim and objective:

1. To create awareness about the dental health and all the treatment options available.
2. To assess the oral health status of patients and to provide necessary Dental treatment.

Method:

A type III examination was carried out with the use of mouth mirror and probe in day light. All the patients were assessed for oral health status and were explained the need to get the problems corrected. The patients were made aware of the existing dental problems and preventive measures were explained.

Observations: A total of 41 patients were examined for various dental problems. Those requiring extensive treatment were referred to MGM Dental College and Hospital, Kamothe.

Oral health status:

Condition	No. of individuals	Percentage %
Dental caries	17	41
Gingivitis	10	25
Root piece	12	29
Prosthesis	2	5

Interpretation and conclusion:

Dental caries is the most common problem among the patients followed by gingivitis.

Oral health education and prevention strategies should be implemented in order to reduce the disease burden among these patients. Most of the population were affected by dental caries which was due to consumption of sugary food. Lack of knowledge regarding proper brushing technique led to oral diseases like gingivitis, periodontal diseases and dental caries.
