AWARENESS ABOUT DENTAL TRAUMA AT SHRI NARAYAN BABA CHARITABLE TRUST, PANVEL

Date: 03RD Oct 2024

Venue: Shri Narayan Baba Charitable Trust Panvel

Faculty: Dr. Kashmira Kadam, Dr. Agraja Patil

Organizing Agency: Department Of Public Health Dentistry of MGMDCH, NSS unit of MGMDCH, Shri Narayan Baba Charitable Trust Panvel

Number of Students attended: 04

Dental trauma, also known as traumatic dental injuries (TDIs), can have a significant impact on a patient's quality of life. TDIs can be caused by a number of factors, including biting your tongue, chewing gum too vigorously, or aging. MGM Dental College constantly takes efforts of extending the oral health care to the community. The oral care initiative was also extended to patients at Shri Narayan Baba Charitable Trust with the intention of creating awareness about Dental trauma and the management of the same.

Aim and objective:

1. To assess the oral health status of patients and to provide necessary Dental treatment.
2. To educate them and create awareness about importance of regular dental check-ups.
3. Effect of regular check-up on overall health of the individuals.

Method:

To diagnose dental trauma, a dentist will:

- Examine the patient's mouth
- Ask about how the injury occurred and the patient's symptoms
- Take dental X-rays or a CT scan

Depending on the severity of the trauma, a dentist may splint the tooth to the adjacent teeth to allow the roots to reattach. Other treatments may include antibiotic therapy, a soft diet, and mouth rinses.

A type III examination was carried out with the use of mouth mirror and probe in day light. All the patients were assessed for oral health status and were explained the need to get the problems corrected. The patients were made aware of the existing dental problems and how nutrition can affect the dental health of a patient.

Observations: A total of 18 patients were examined for various dental problems. Those requiring extensive treatment were referred to MGM Dental College and Hospital, Kamothe.

Oral health status:

Condition	No. of individuals	Percentage %
Dental caries	7	39
Gingivitis	5	33
Root piece	4	16
Prosthesis	2	12

Interpretation and conclusion:

1. Dental caries and gingivitis are the most common problem among the patients which can be reduced by utilizing proper diet and nutrition and also the facilities available. A regular dental check-up can lead to decrease in the number of decayed teeth.
2. Oral health education and prevention strategies should be implemented in order to reduce the disease burden among these patients. Majority of the oral diseases are due to lack of proper health education of the patient and insufficient dietary intake.

TEAM MEMBER PRESENT AT THE CAMP

List of Attendees

Name of Staff	
1.	Dr. Kashmira Kadam
2.	Dr. Agraja Patil
Name of Interns& Students	
3.	Lucky Mahure
4.	Mrunmayi patil
5.	Prasad Gharge
6.	Sanika Gore
