AWARENESS OF MANagements OF DENTAL EMERGENCIES AT PEOPLE'S EDUCATION SOCIETY'S CENTRAL SCHOOL, CBD BELAPUR

Date: 29th JANUARY 2024

Venue: People's Education Society's School, CBD Belapur

Faculty: Dr. Pankaj Londhe, Dr. Prachiti Terni

Organizing Agency: Department Of Public Health Dentistry, MGMDCH; NSS Unit, MGMDCH; MGM Dental & Research center Belapur

Number of Students attended: 5

While there are numerous dental-related patient complaints and clinical diagnoses, healthcare providers must be able to recognize and treat dental emergencies in an expedited manner. Furthermore, patients with dental emergencies often present in clinical settings other than a dentist's office, making it important that non-dentist providers understand the sequelae of untreated emergencies and provide appropriate dental referrals. In the absence of definitive treatment, many dental emergencies have high morbidity or mortality. Most dental emergencies can be categorized into one of three main etiologies: traumatic, infectious, and post-procedural complications. MGM Dental College keeps organizing oral health check-up and treatment camps to enhance the dental health in our community. Such an initiative was taken with association of **People's Education Society's School, CBD Belapur for creating awareness of Management of Dental emergency.**

Aim and objective:

1. To create awareness amongst the students about importance of oral health.
2. To educate them about teeth eruption sequence.

Method:

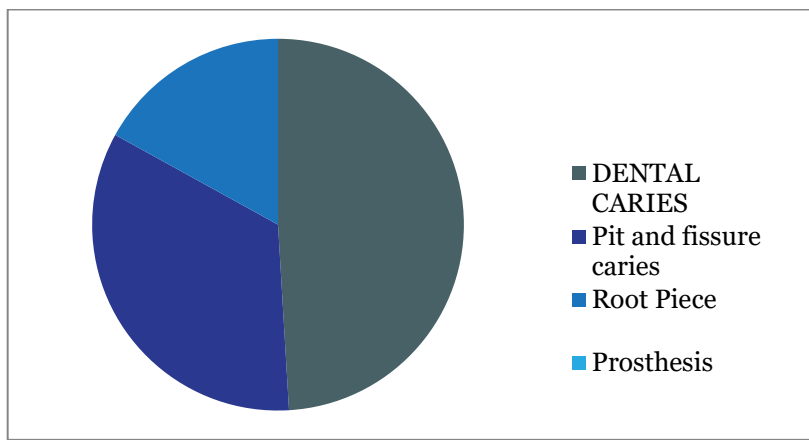

Awareness regarding importance of oral health was done. The students were made aware about teeth eruption sequence. The myths about milk teeth and permanent teeth were addressed. Few questions of students

were solved regarding the missing teeth and the mobile teeth. An oral health check-up was done and the students were guided according to their respective dental problems.

Observations:

A total of 70 patients were examined for various dental problems. Students maximally had dental caries due to high sugar intake, improper brushing and no dental guidance. The students were explained about the problems and also the problem was taken forward to their parents.

Condition	No. of individuals	Percentage %
Dental caries	36	49
Pit and fissure caries	24	34
Root piece	6	17
Prosthesis	0	0

Interpretation and conclusion:

1. Students even after being aware about the teeth eruption sequence and their questions were solved.
2. Students were explained about the importance of oral health check-ups.
3. Myths about the primary and permanent teeth were cleared.

INVESTIGATION DONE BY THE
DENTAL TEAM
