Faculty: Dr. Kashmira Kadam, Dr Prachiti Terni

Organizing Agency: PHD Dept, MGMDCH; NSS unite of MGMDCH & MGM Hospital and Research Centre, Belapur

Number of Students attended: 5

oral health education awareness camp organized by MGM Dental College & Hospital focusing on "malaligned teeth" was conducted at people's education society, Belapur. The oral health care initiative was also extended to students of PES, Belapur with the aim to create awareness oral health and nutrition.

Aim and objective:

1. To create awareness among people about malaligned teeth and the potential issues related to it.
2. To assess the oral health status of patients.

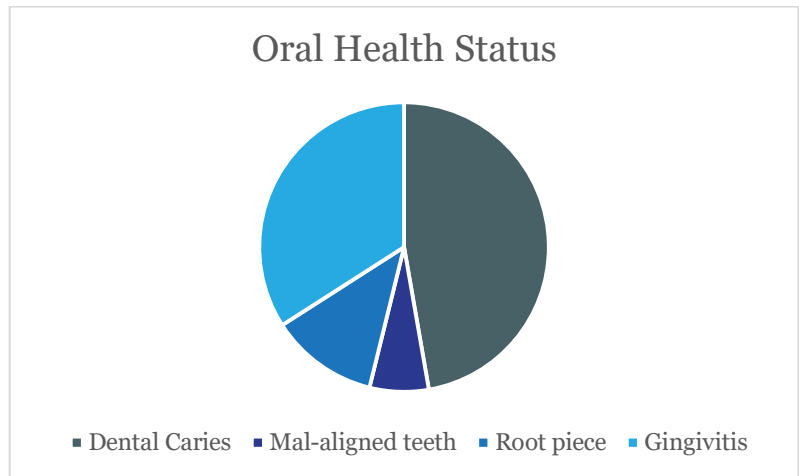

Method:

A type III examination was carried out using a mouth mirror and probe in day light. The oral health statuses of the visitors were evaluated and they were explained the need to get the problems corrected. The patients were made aware of the existing dental problems and preventive measures were explained.

Observations: A total of 44 patients were examined for various dental problems. Those requiring extensive treatment were referred to MGM Dental College and Hospital, Kamothe.

Oral health status:

Condition	No. of individuals	Percentage %
Dental caries	19	43
Mal-aligned teeth	7	16
Root pieces	5	11
Gingivitis	14	31

Interpretation:

The Oral Health Education Awareness Camp for malaligned teeth at People's Education Society Prathmik Vidyalaya, Belapur suggests an initiative aim at educating and raising awareness about malaligned teeth- a condition in which one or more teeth are situated outside the line of dental arch. The camp appears to be a proactive effort to address oral health outcomes within the community, particularly school aged children.

Conclusion:

The Oral Health Education Awareness Camp for malaligned teeth at People's Education Society PrathmikVidyalaya, Belapur, signifies a commendable effort in promoting oral health awareness and addressing specific issues like malaligned teeth within the community. By organizing such camps, the MGM dental college contribute to identification, education and intervention, potentially improving the overall oral health outcome and quality of life for individuals affected by malalignment.
