IMPORTANCE OF PREVENTIVE DENTAL TREATMENT AT SHRI NARAYAN BABA CHARITABLE TRUST

Date: 18/01/2024

Venue: Shri Narayan Baba Charitable Trust, Panvel

Faculty: Dr. Rafeeq Nalband, Dr. Neeraj Kolge

Organizing Agency: Department Of Public Health Dentistry, MGMDCH; NSS Unit, MGMDCH; MGM Dental & Research center Belapur

Number of Students attended: 4

Dental health plays a crucial role in an individual's overall well-being, and preventive dental care is instrumental in preserving a healthy and radiant smile throughout one's lifetime. With the prevalence of oral health issues and their impact on systemic health, understanding the significance of preventive measures becomes imperative. MGM Dental College & Hospital along with NSS unit conducts dental camp for educating and promoting good oral health care among the students. This was extended to population of Shri Narayan Baba Charitable Trust with the aim to create awareness about the importance of preventive dental treatment.

Aim and objective:

1. To assess the oral health status of the population
2. To create awareness about oral health
3. To educate them about the benefits of preventive practices in dentistry
4. To provide basic dental care for their existing dental problems.

Method:

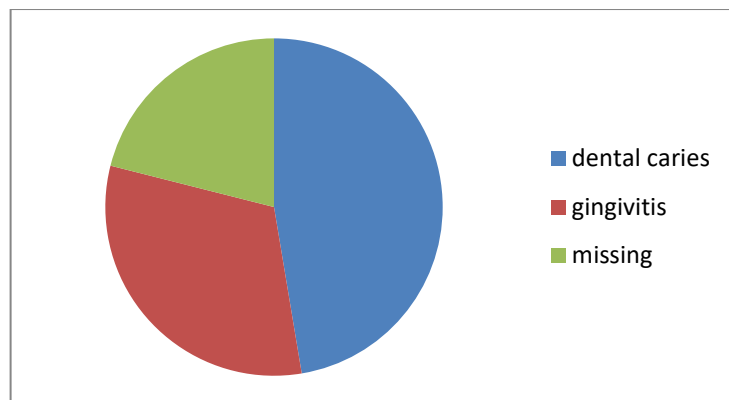

The patients were assessed using a mouth mirror and probe on the dental chair. The oral health statuses of the visitors were evaluated and they were explained about the benefits of preventive practices on

oral health. They were demonstrated proper brushing techniques .Various preventive and corrective measures to be undertaken were explained to the patients. The visitors who consented for treatment were provided with basic dental care for their existing dental problems. Visitors having extensive dental problems were referred to MGM Dental College & Hospital for further treatment.

Observations: A total of 19 patients were examined for various dental problems. Those requiring extensive treatment were referred to MGM Dental College and Hospital, Kamothe.

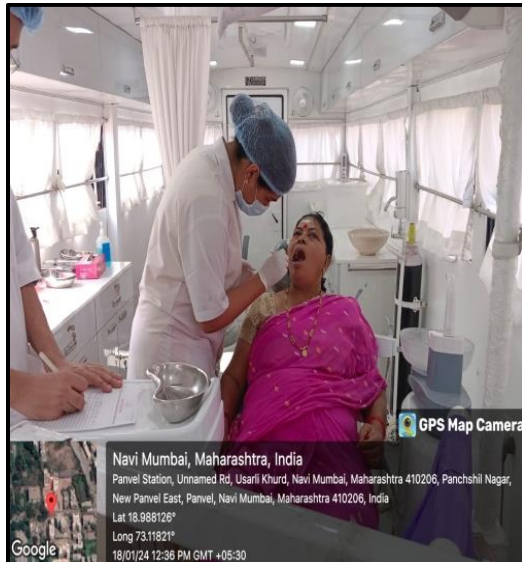

Oral health status:

	No. of individuals	Percentage %
Dental caries	9	47
Gingivitis	6	32
Missing	4	21

Interpretation and conclusion:

- Knowledge of visitors regarding nutrition was good.
- Dental caries and gingivitis were most prevalent in the evaluated group. This was followed by missing. Preventive and corrective measures were undertaken to prevent further deterioration of oral health.
- Treatment: As a part of preventive treatment measures, silver amalgam filling was done and oral prophylaxis was provided to the patients at SBSS, Parnell.
