HOUSEHOLD SURVEY AT ADOPTED VILLAGEWAJE

Date: 21st December 2022

Venue: Chinchvan Village

Faculty: Dr. Deeksha Shetty, Dr. Prachiti Terni

Organizing Agency: PHD Dept MGMDCH; NSS Unit, MGMDCH, Unnat Bharat Abhiyan

Number of Students attended: 3

MGM Dental College has adopted villages under Unnat Bharat Abhiyan scheme of the Indian Government and we constantly strive to extend our efforts in providing and adding quality to their lifestyle. We also provide basic oral health care to the community. The oral care initiative includes dental check up of the residents of Waje Village and providing dental treatment through referral program with MGM Dental College & Hospital, Kamothe. The residents were also made aware of the various ill effects of tobacco and tobacco products. A household survey was done from home to home for Unnat Bharat Abhiyan program.

Aim and objective:

1. To assess the current situation through a household survey of the villagers/residents & to work with them in identifying development challenges and evolving appropriate solutions for accelerating sustainable growth
2. To educate them and create awareness about oral health.

Method:

A household survey was conducted at every house using a survey form wherein details such as no. of members in the family, their age, their education status, their occupation status, possession of Aadhar card, bank account etc are recorded in detail using codes. Also oral health examination was carried out with the use of mouth mirror and probe in day light. All the patients were assessed for oral health status and were explained the need to get the problems corrected. The residents were made aware of the existing dental problems and preventive measures were explained.

Observations: A total of 07 residents were examined for various dental problems. Those requiring extensive treatment were referred to MGM Dental College and Hospital, Kamothe.

Oral health status:

Condition	No. of individuals	Percentage %
Dental caries	04	57.14
Gingivitis	01	14.2
Malocclusion	01	14.2
Missing	01	14.2
Impacted	00	00

Interpretation and conclusion:

Dental caries is the most common problem found among the residents followed by gingivitis.

Oral health education and prevention strategies should be implemented in order to reduce the disease burden among these patients

HOUSEHOLD SURVEY BEING RECORDED BY THE TEAM MEMBER
