AWARENESS ABOUT IMPORTANCE OF MAINTAINING GOOD ORAL HYGIENE **AT ZP SCHOOL MARATHI, MANOR 10**

Date: 24th August 2022

Venue: ZP School Marathi, Manor Ten.

Faculty: Dr. Rafiq Nalband and Dr. Pankaj Londhe

Organizing Agency: PHD Dept, NSS UNIT of MGMDCH. with Rotary club 3141

Number of Students attended: 3

Oral hygiene is the practice of keeping your teeth free from decay and your other mouth structures free from infection. The primary goal of oral hygiene is to prevent plaque buildup that may cause tooth decay or gum infection. It has been said that the mouth is the gateway to your overall health. Not properly taking care of your teeth and gums can lead to a variety of health problems. From loss of teeth and gum disease to heart disease and diabetes, oral health is very important.

MGM Dental College constantly takes efforts of extending the oral health care to the community. The oral care initiative was also extended to patients at ZP School Marathi, Manor Ten, with the intention of creating awareness about the importance of maintaining good oral health and providing oral health care to the patients.

Aim and objective:

- 1) To educate the school children on importance of maintaining good oral health.
- 2) To treat the school children for pit and fissure caries and to give fluoride treatment.

Method:

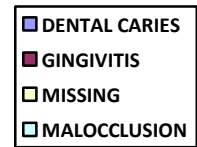

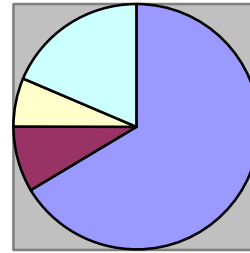

MGM Dental college and hospital staff members along with students organized a program on awareness of maintaining good oral hygiene. Participants were explained how to maintain good oral hygiene and the effects it has on the overall health. All the patients were examined for their oral hygiene status.

Observations: A total of 55 students participated in the awareness program & were later treated. Many students faced various dental diseases due to poor oral health.

Sign:

The students with pit and fissure caries were treated with sealants and fluoride application was also carried out for the required.

Condition	No. of individuals	Percentage %
Dental caries	35	33.33%
Gingivitis	8	44.44%
Missing	7	11.11%
Malocclusion	5	11.11%

Interpretation and conclusion:

Dental caries is the most common problem among the patients followed by Gingivitis.
